

Metastatic Breast Cancer

There are many factors to be taken into account, and a wide variation between patients with metastatic disease with regards to these factors, which makes it very difficult to specify the treatment pathways for metastatic breast cancer. The sequence of treatments given below gives a general representation, but treatment steps may be omitted, or given in a different sequence, in some cases.

*****Consider entry into clinical trials for all eligible patients*****

Reason for update: MM and bevacizumab for triple negative removed	Approved by Consultant Oncologist: Dr A Neal
Version: 5	Approved by Consultant Oncologist: Dr R Laing
