

Patient Agreement to Systemic Therapy: Consent Form	
R-Idelalisib	
Patient's details / addressograph:	<input type="checkbox"/> Male <span style="margin-left: 200px;"><input type="checkbox"/> Female</span>
	Special requirements (e.g. other language/other communication method)
	<b>Consultant:</b>

**Name of proposed course of treatment: R-Idelalisib**

Week 1: Rituximab IV infusion on day 1 and day 2

Week 2: Rituximab IV infusion on day 1

Week 4, 6 and 8: Rituximab IV infusion on day 1

Week 12, 16 and 20: Rituximab IV infusion on day 1

Idelalisib tablets oral twice a day continuously from the start of treatment and this will continue until disease progression or unacceptable toxicity

Macmillan/CRUK/other leaflet(s) given **Statement of health professional** (to be filled in by health professional with appropriate knowledge of proposed procedure, as specified in consent policy)
 I have discussed what the treatment is likely to involve (including inpatient / outpatient treatment, timing of the treatment, follow-up appointments) and location.
**The intended benefits**
 Disease control - the aim is not to cure but to control the disease. The aim is to improve both quality of life and survival
**Significant, unavoidable or frequently occurring risks:**
**Common side-effects:** : low white blood cells (neutropenia) with risk of infection, low red blood cells (anaemia), low platelets with risk of bleeding, diarrhoea, rash, altered liver function (monitored with blood tests) , inflammation of the lung which can cause cough and shortness of breath, tiredness and feeling weak.

Infusion reactions related to Rituximab: flu-like symptoms (high temperature, chills, muscle aches, tiredness, dizziness and headache), low blood pressure, flushing and allergic reactions.

**Less common but potentially life threatening side-effects:** reduced resistance to infection which can lead to serious infections.

Cancer can increase your risk of developing a blood clot (thrombosis), and having chemotherapy may increase this risk further. A blood clot may cause pain, redness and swelling in a leg, or breathlessness and chest pain - you must tell your doctor straight away if you have any of these symptoms.

Some chemotherapy drugs can damage women's ovaries and men's sperm, with risk of infertility and early menopause in women. I have warned the patient about the likelihood of:

- early menopause in women       infertility (in men and in women)

Some chemotherapy drugs may damage the development of a baby in the womb (foetus), leading to the many risks associated with an abnormal pregnancy. Therefore, I have discussed the issues of protected sex. This is an issue for both men and women. The patient has been advised not to become pregnant / not to get a partner pregnant during the period of treatment, and for 12 months (women) / 6 months (men) after treatment has completed.

Any other risks:

Signed.....	Date .....
Full Name (print) ..... / .....	Job Title.....
(Forename)	(Surname)

**Statement of patient**

<b>Patient Signature</b>	
Please read this form carefully, which describes the benefits and risks of the proposed treatment. You have the right to change your mind at any time, including after you have signed this form.	
<b>I agree</b> to undergo R-Idelalisib treatment. I understand the treatment and am aware of the potential side-effects arising from this treatment.	
<b>I understand</b> that you cannot give me a guarantee that a particular person will perform the procedure. The person will, however, have appropriate training and experience.	
Signed.....	Name.....
Date.....	
<b>A witness should sign below if the patient is unable to sign but has indicated his or her consent.</b>	
Signature .....	Date .....
Name (PRINT) .....	

**Statement of interpreter** (where appropriate)

I have interpreted the information above to the patient to the best of my ability and in a way in which I believe s/he can understand.

Signed ..... Name (PRINT) ..... Date.....

**Confirmation of consent** (to be completed by the chemotherapy nurse when the patient attends for the first cycle)

On behalf of the team treating the patient, I have confirmed with the patient that s/he has no further questions and wishes the treatment to go ahead.

Signed ..... Name (PRINT) ..... Date.....

**Copy accepted by patient: yes/no (please ring)**  
**Copy to be retained in patient's notes**
